THE PREVENTION OF HPV-RELATED ORAL CANCER

Transmission of the Human Papilloma Virus

Risk Factors

Signs and Symptoms of HPV-related Oral Cancer

Oral cancer can be diagnosed by dental examination, with a doctor checking for any abnormal growths. It is often detected during routine dental checkups. Early detection is crucial, as early stage oral cancer is more treatable.

- A lump, mass, or growth in the mouth or neck
- A sore that does not heal
- Difficulty swallowing or speaking
- Painful swallowing or speaking
- A change in the appearance of the mouth or tongue
- A change in voice or coughing
- Difficulty opening the mouth

HPV lesions are usually located in the mouth, and they can cause pain or discomfort.

Due to the fact that most cases of HPV-related cancers among women occur as a result of HPV infection, it is understandable why men have a higher tendency to be at risk of oral cancer. Therefore, the virus causes oral cancer in men more than women, up to 3 to 1 ratio.

Deficit Disorder
THE NEW FRONTIER

What is Nature Deficit Disorder?

Benefits of Environmental Education

What promotes healthy child development?

Reducing a Spiritual Connection to the Earth

What experiences can help with development?

Emotional, physical, social, and cognitive development

Benefits of environmental education:

Larger attention spans
More focused
More social and self confidence
Higher academic test scores
Less aggression
Better memory
Better self esteem
Better attention

In the home:
Maintaining a spiritual connection to nature can help with:

Less stress
More creativity
Better mood
More self confidence
Better communication
Better social skills
Better problem solving
Better decision making
Better overall health

In the classroom:

More attention
More focus
Less distraction
Better testing scores
Better social skills
Better overall health

In the community:

More community involvement
More activities
More events
More diversity
Better environment
Better health
Better overall quality of life

In the world:

Less carbon emissions
Less pollution
Less waste
Less water usage
More biodiversity
More sustainable future
