THE PREVENTION OF HPV-RELATED ORAL CANCER

Transmission of the Human Papillomavirus

Risk Factors

Due to the fact that most case studies focus on HPV-associated cancers among women, it is understandable why men have a higher tendency to be lack of knowledge about HPV infection. Therefore, the virus causes oral cancer in men more than in women, up to 3 to 1 ratio.

Signs and Symptoms of HPV-related Oral Cancer

Oral cancer can be diagnosed by Dentist/Biologists. However, it is generally diagnosed in the later stage, when it is very difficult to treat. Therefore, it's important to keep an eye on the disease when mortality is highest.
LOST AT SEA

A study of comparative flood myths

Explanations

Theory 1:
A flood story was spread around the world by Priests from the Middle East.

Theory 2:
Stories about floods spread around the world.

Theory 3:
A flood story was spread around the world by Priests from the Middle East.
